Addendum to the Carousel Software LLC License
Modified August 2004
Modified June 2006

I.   The trigger time for the **Disable Timer** referenced in section 2.5 will be 90 days. That is, when a monthly payment is received, a software module or password will be sent to the Licensee allowing the program to function for 90 more days from the start of the new month.

II   The source code will be **escrowed** by a third party. This third party will also have access to a master password or software module, such that in the event that Carousel Software LLC ceases to exist, he can disable the Disable Timer, and allow the software to run forever. He can at that time also deliver the source code to any existing clients. If Carousel Software LLC does still exist, even if one of the parties departs, then this escrow provision will not be triggered.

        At this time, there are two third party people:
                Ken Leonard, a resident of Otis Orchards.
                Barry Dallenbach, a resident of Athol Idaho.

III   **Permissions**. The Client needs to recognize that computer systems are very complex, and when a particular computer already has a series of applications installed in it, that installing yet another application could make an earlier one break. The installation of the Carousel Software CarouselCars system is done by scripts produced by Microsoft software tools, and these scripts will install DLLs and other modules also produced by Microsoft. Because of a phenomena known in the industry as "DLL Hell", sometimes the replacement of an old DLL by a newer one, both generated by Microsoft, will make the old application break. Carousel Software cannot be held responsible for such events. Carousel Software will attempt to make things work again, but sometimes the interactions between disparate applications never becomes apparent.

IV   **Collections**. Since our prices are based on the number of cars sold in a month, and since it appears that all this data is not reconciled till beyond the end of the month, we will ask you to run the Monthly Invoice program on or about the 15th of the subsequent month. When payment is made by you and received by us, then the new code number to bump the Disable Timer will be emailed or phoned.

V.   *Updates.* It is essential that all clients use the same version of the software. So as updates occur to the software, the client agrees to let Carousel Software update his system, and possibly, his database. This is especially crucial when government requirements change.
